➤➤➤ My Skills

Blockchain

Bitcoin

Ethereum

Solidity

Truffle

Hardhat

Web3 js

React js

Vue js

Node js

➤➤➤ Education

Sep. 2010 - Jun. 2013
University of Waterloo

Yamashita Zenko

Blockchain & Fullstack Web Developer

Summary

When I talk about my primary skills, it can separate them into two technology with Blockchain and Web Front-End & Back-End base on Javascript.

Of course, the first skill of them is cryptocurrency technology base on the blockchain.

I am a senior blockchain developer with six years of experience in this field. I research, develop and deploy with enthusiasm BTC, Ethereum, Web3.js, peer-to-peer networks since 2016. During five years in this field, I became a technical expert with a strong understanding of my client's business goals.

Through the completed many projects, I have developed expertise across the following sectors:

- Multisignature Transaction
- NFT marketplace
- Ecommerce
- online gambling
- ICO
- Payment Gateway

My key technologies to make this possible capability include:

- BTC, Ethereum, Solidity, Smart Contracts, Truffle, Web3js, Ganache, Metamask, Infura API.

My second primary skill is Web development.

I specialized in developing web applications using mainly JavaScript, with the newest frameworks.

In many cases, the blockchain projects I developed also is using with web technology.

I have developed expertise across the following sectors:

- Ecommerce
- Enterprise
- CRM/ERP
- Education
- Startup MVP

My skills working on frontend and backend include:

React JS, React Native, Vue JS, Node JS, Express, Mongo DB, Mysql

Conclusion

I can fulfill all your requirements in a short time with the best quality. Through years of development, I have known faith and quality are the most important.

I have confidence in my skills, and for me, the most important is the clients' satisfaction.

Work EXPERIENCE

Blockchain Developer

AnonyDoxx (self-employ)

Jan 2022 - Present

- Develop the BEP20 token ADXX for AnonyDoxx
- Built the portal site of ADXX token with React js
- Develop ADXX token analytics web page
- Develop and design new web interfaces, layouts and site graphics
- OCR driving licence detection module development
- Build Video Conversion System with ffmpeg
- Develop nft metaverse land and land levels with shib community
- Develop DAO system of Veganrobs community and staking part of SOS OpenDAO

<https://cryptosils.com/>

Blockchain Developer

Yield Guild (self-employ)

Sep 2021 - December 2021

- Created PG NFT token (ERC-721)
- Created Life NFT token (ERC-20)
- Develop the NFT smart contract with solidity
- Using the openzeppelin library in solidity smart contract
- Built the mint site with React js
- Developed the Dashboard and Inventory for minted the Badge NFT

Blockchain Developer

Crypto Market Place

Jun 2021 - Julv 2021

- Worked with business system analyst to get clear understanding of the requirements
- Actively participated in meetings with clients to determine website goals and development strategies
- Implement the Bitcoin, Litecoin and Monero payment
- Developed the multi-signature Escrow

- Involved in definition of technical requirements based up business requirements
- Created cross-browser compatible and standards-compliant web pages using CSS-based layouts
- Responsible for code optimization and test code across browsers

Blockchain Developer

Ovidex protocol

Feb 2021 - Jun 2021

- Created the Ovidex protocol by the forking bancor protocol
- Developed the Multi-chain AMM
- Ovidex is hosted by the community on IPFS. Accessible as long as at least 1 user in the world is hosting
- Built tools for proving your transaction history and selectively disclosing Ovidex deposits
- Integrated the goernance logic to driven by OVX token
- Implemented that trades are executed instantly and confirmed on the blockchain within seconds.
- Built feature for proving your transaction history and selectively disclosing Ovidex deposits.

• URL

<https://ovidex.network/>

MERN Stack Developer

The World Management

Nov 2018 - Dec 2020

- Analyzed business requirement to translate functional requirements into technical requirements and developed web application using MongoDB, Express, Node JS and React JS/Redux (MERN stack).
- Designed and implemented the data flow of the React application by wiring up State Store, Components, Containers, Action Creators and Reducers.
- Used Axios to call web services/APIs to fetch data from backend and render the data to data store of Redux.
- Involved in designing and developing responsive User Interface (UI) using HTML5, CSS3, Bootstrap, JavaScript and React JS.

- Worked with Node JS and Express to build the server and wrote middleware to handle HTTP requests.
- Built stable React components and standalone functions to be added to future pages.
- Involved in designing MongoDB schema and data access service interacting with MongoDB.
- Deployed Redis service to cache recent http request and reduce response time.
- Applied JWT and Passport middleware to backend for authentication and security purpose.

Front End Developer

The World Management

Nov 2017 - July 2018

- Created web pages using HTML5, CSS3, JavaScript, jQuery, Ajax and angular Js
- Involved in complete SDLC life cycle - Designing, Coding, Testing, Debugging and Production Support
- Worked on React JS components, Forms, Events, Keys, Router, Animations and Redux concept
- Involved in designing and developing the web pages using HTML 5, CSS3, JavaScript, Bootstrap, SASS, LESS, React JS, Redux, Flex, Node JS, Mongo DB
- Implement modules into Node JS to integrate with designs and requirements
- Created and maintained the framework and layout of each portal with Cascading Style Sheets (CSS)
- Implement new Front-End features with Typescript/ JavaScript and other RESTful APIs
- Used Node JS to run Web pack tasks and build properly the project
- Developed responsive applications using Bootstrap which allowed the same application to be optimized for both mobile and desktop resolutions
- Created Single Page Application with loading multiple views using route services and adding more user experience to make it more dynamic by using React JS framework
- Achieved React JS Authentication for the application and stored generated token so that token can be sent with each request to secure resources in Web API
- Strong communication skills and the ability to gather and filter requirements
- Self-directed and able to work across development organizations.
- Finding out the bugs, broken links and missing images etc. and rectifying them

Font End Developer

FreeLancer

March 2017 - Nov 2017

- Experience with relational databases and/or NoSQL databases (DynamoDB, MongoDB, S3, etc)
- Meet with project stakeholders to discuss their vision, ideas and create compelling digital experiences. Translate design patterns into application architectures
- Used React JS to produce necessary front- end design in various pages: form validation, user authentication, CRUD, card layout, populate information, etc.
- As part of a team, employed setup server- side development using Node JS and Express JS
- Worked with Passport and JSON web tokens for authentication and authorization security configurations using Node JS.
- Worked with NPM commands and using package JSON for managing dependencies and dev- dependencies of Node JS applications.
- Develop software that takes in API files and interacts with back-end databases
- Conceptualize, design and develop user interface designs in a fast-paced online/mobile environment. Consumer applications as well as enterprise platforms
- Extensively worked with making calls to APIs to fetch the data from the backend as JSON response and parse it on the UI for DOM/CSS manipulation.
- Executed and contributed to full-stack web development projects, with an emphasis on front end features, browser manipulation, and cross-browser compatibility (using HTML, CSS, JavaScript, jQuery, Node JS, and React JS)
